

FIGURE 1. Transient response of the RG3000 from  
50% full load to 100% full load,  $V_0 = 200\text{Vdc}$

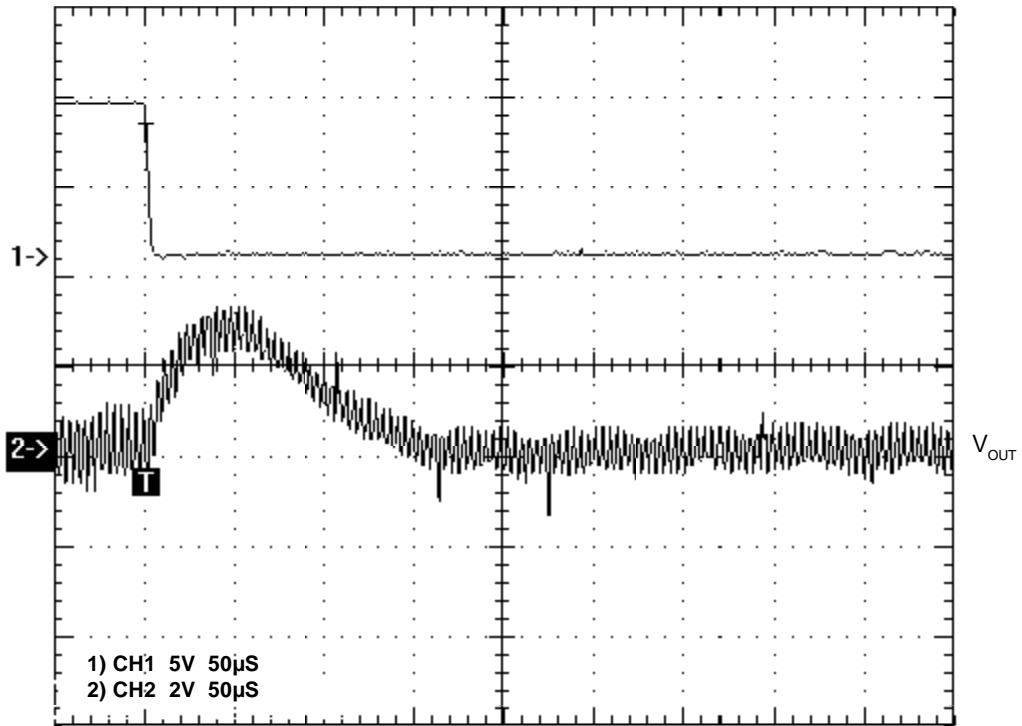

FIGURE 2. Transient response of the RG3000 (Negative)

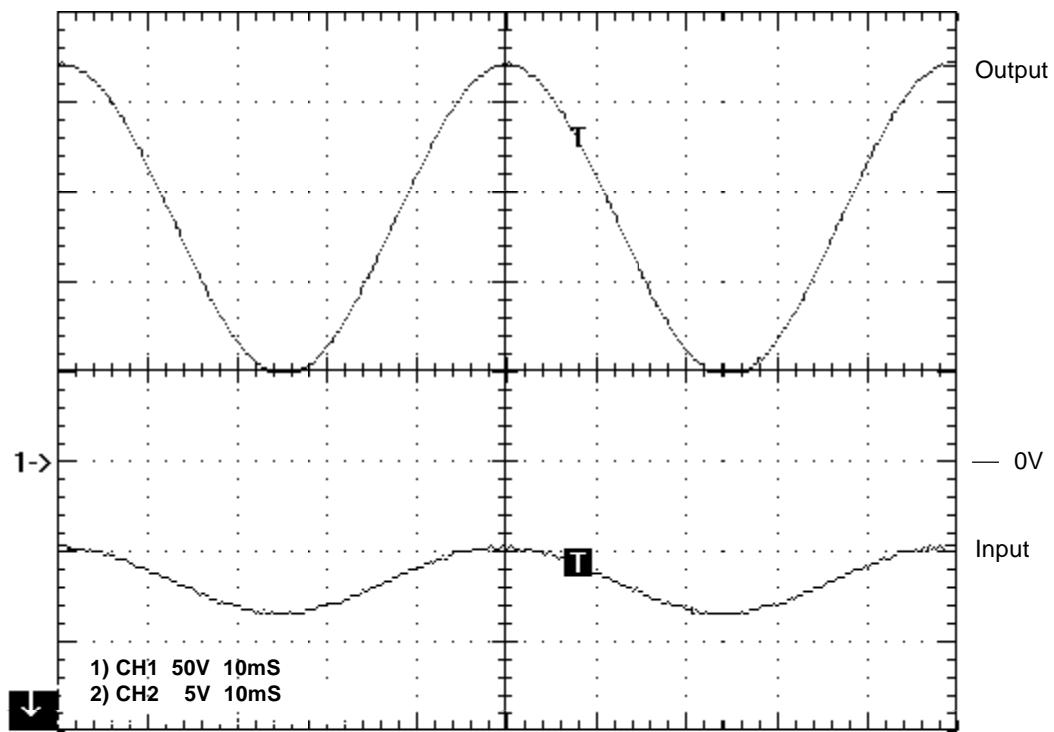

FIGURE 3. Sine wave riding on a 48V bus (See Figure 5)

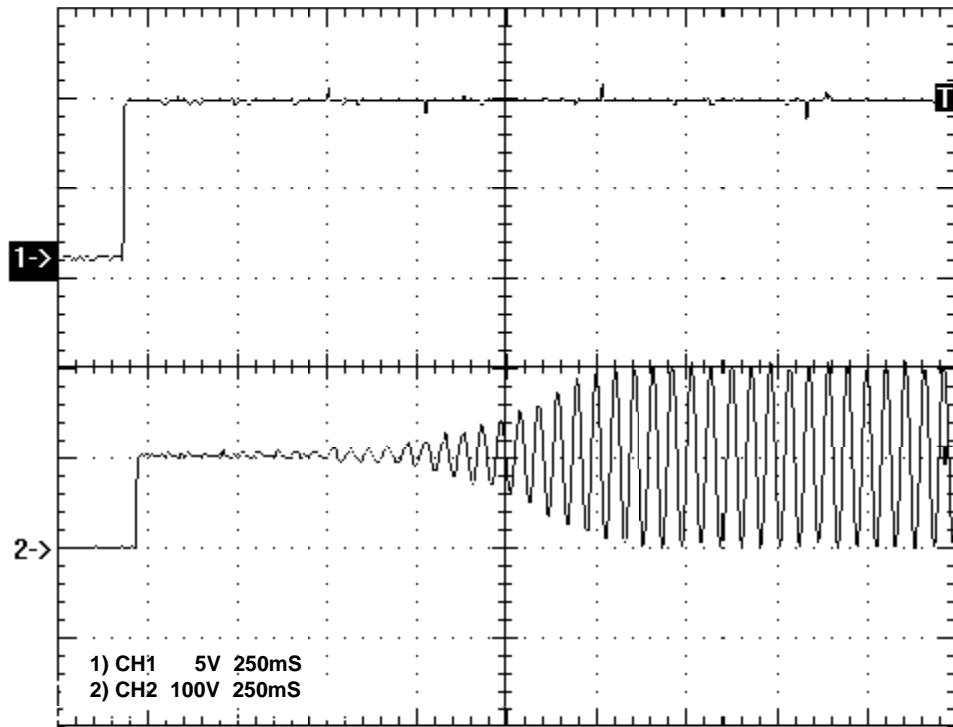

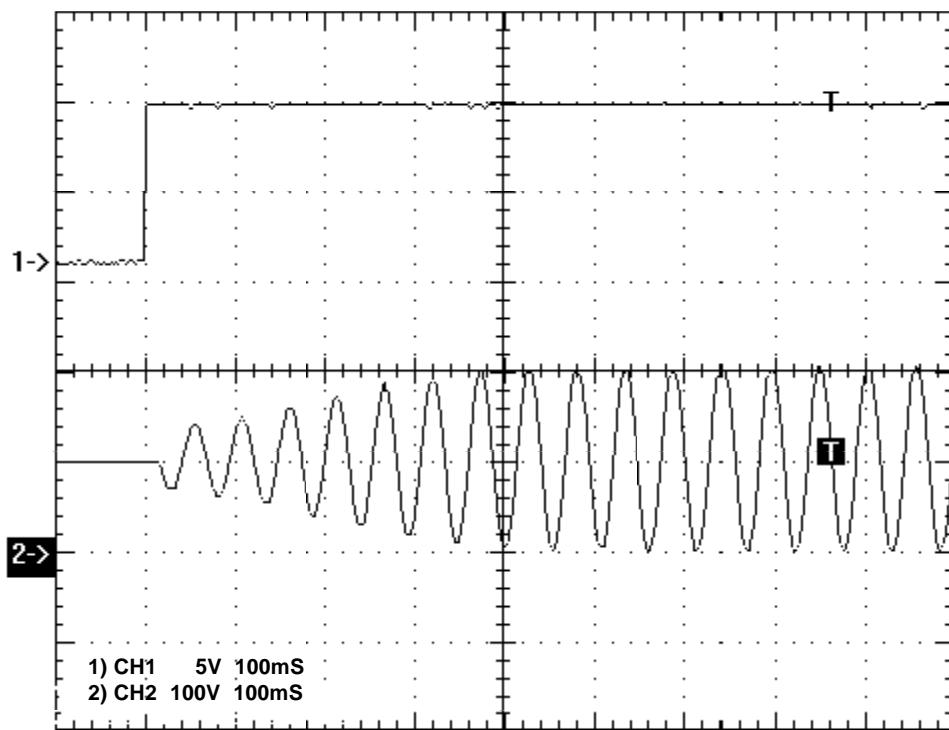

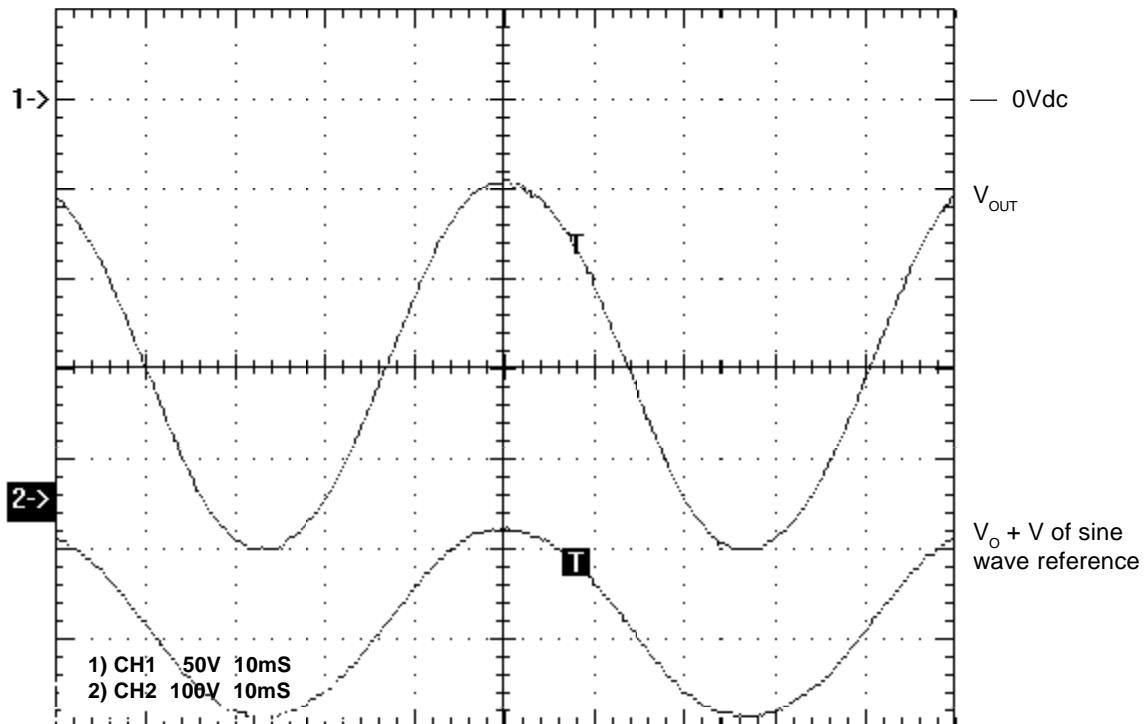

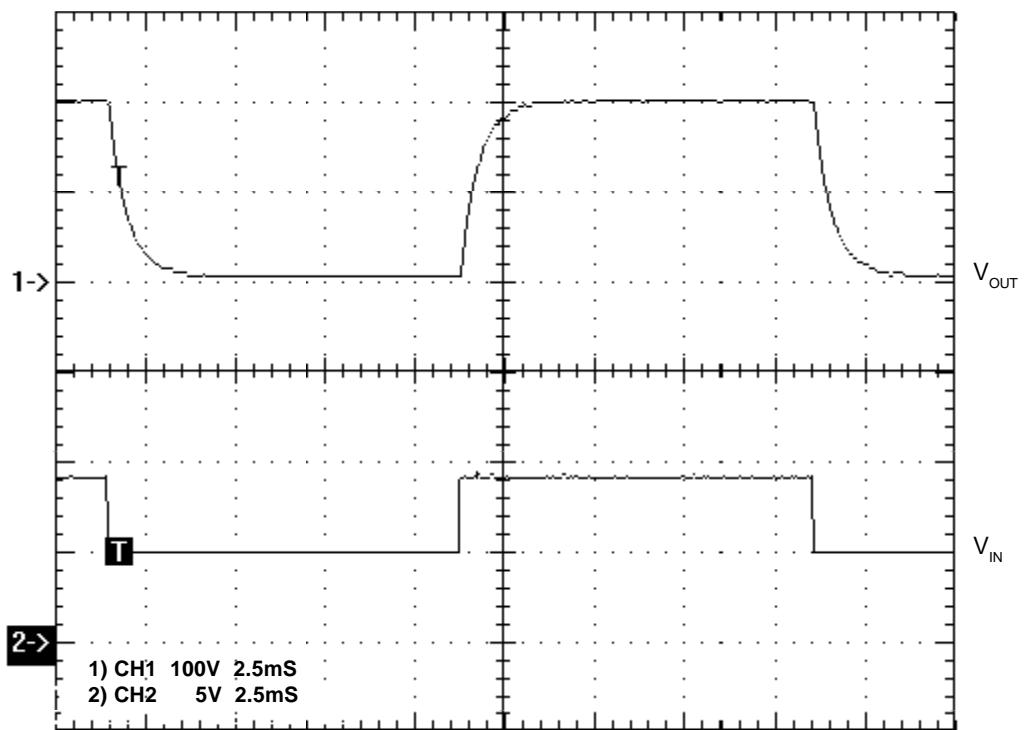

FIGURE 4. Turn on delay of the RG3000 with resistive load

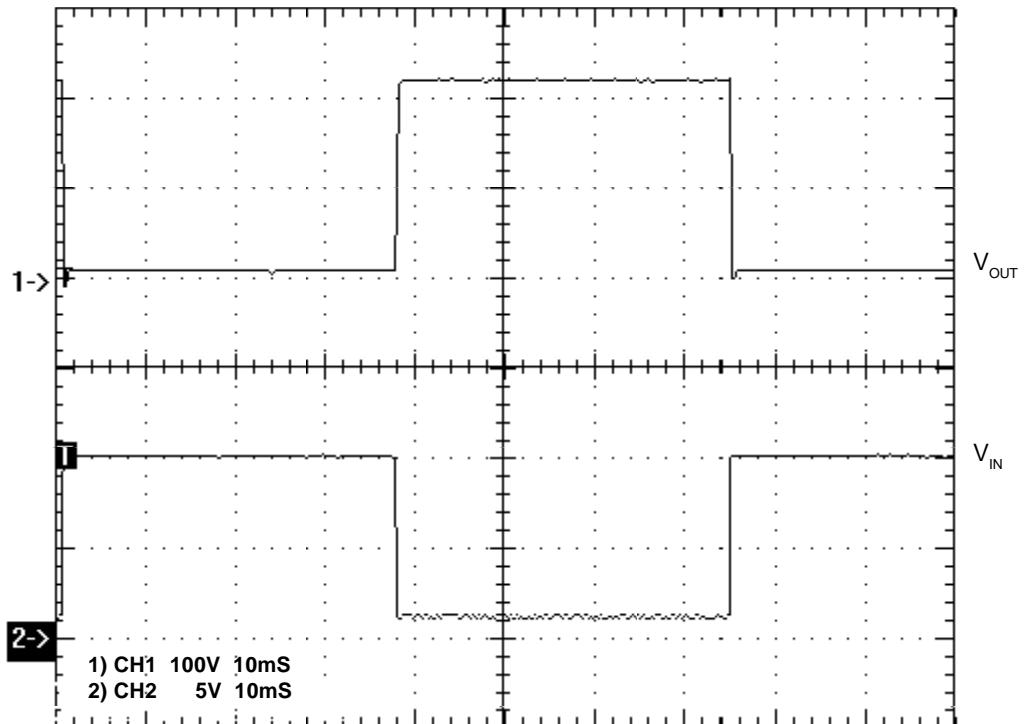

**FIGURE 5. Turn on delay of the RG3000 with CL+RL**  
(See Figure 5 of RG3000 Datasheet)

**FIGURE 6. Channel 1 shows the output of the RG3000 riding on the -48V input power bus. Channel 2 shows the output of the RG3000 plus the reference sine wave riding on the -48V input power bus**

**FIGURE 7.** Channel 1 shows the output of the RG3000 when the non-inverting, bandwidth-limited input is used

**FIGURE 8.** Channel 1 shows the output of the RG3000 when the inverting input is used

**NOTE:** The slow rate of the input signal may trigger the short circuit protection if the output is fully loaded. Use this input when a lower amplitude output and higher frequencies are required.
