

BD15007

15W DUAL DC/DC CONVERTER
 3:1 Input Voltage Range, Dual Outputs
 2000Vdc Isolation

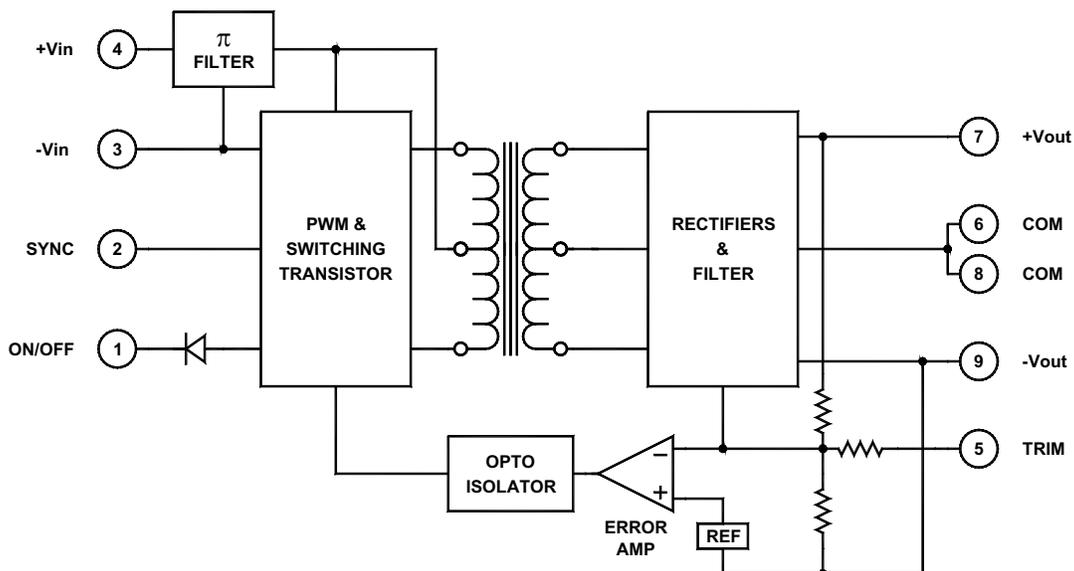

Key Features

- 3:1 input voltage range
- 80% efficiency
- Input-to-output isolation
- Soft start
- Short circuit protection
- 150 μ A off state current
- Multiple converter synchronization
- Dual isolated outputs
- Output overvoltage protection (OVP)

Functional Description

The BD15007 is a 15W dual DC/DC converter that accepts $24V_{IN}$ and produces $\pm 5V_{OUT}$. The converter offers 3:1 input voltage range, 400kHz switching frequency, forward topology and comes packaged in a $2 \times 1 \times 0.395$ -inch case. The converter is designed and tested for 2000Vdc input-to-output isolation.

EXTERNAL SYNCHRONIZATION

The converter can be synchronized to an external TTL or CMOS clock signal. Insert a 470pF to 1000pF ceramic capacitor between the driving clock signal and the SYNC pin (Pin 2) of the converter. The frequency of the signal must be between 390kHz

and 430kHz, with a duty cycle of 50% and an amplitude between 3Vdc minimum and 5Vdc typical. See Application Note DC-005: Synchronization.

EXTERNAL TRIMMING OF OUTPUT VOLTAGES

To trim the output voltage DOWN, connect a 1% 1/8W resistor between the + (plus) output and trim pin of the converter. To trim the output voltage UP, connect a 1% 1/8W resistor between the - (minus) output and trim pins of the converter. For UP/DOWN trimming capability, connect a 10kΩ potentiometer between the + and - output pins, with the wiper arm connected to the trim pin.

The trim resistors/potentiometer can be connected at the converter output pins or the load. However, if connected at the load,

the resistance of the runs becomes part of the feedback network which improves load regulation. If the load is some distance from the converter, the use of #20 gauge wire is recommended to avoid excessive voltage drop due to the resistance of the circuit paths.
