Functional Description

The LN10009 is an isolated, low-noise 10W dual output DC/DC converter that accepts 9V_{IN} to 18V_{IN} and provides +6V_{OUT}@1.3A and -6V_{OUT}@270mA. The converter's design is based on Beta Dyne's patents and offers low noise and an extended operating temperature range from -40°C to +85°C.

¹ In applications where the -V_{OUT} is loaded more than +V_{OUT}, a minimum load is required between +V_{OUT} and GND. If the load is connected between +V_{OUT} and -V_{OUT}, no minimum load is required.

² For dual converters if only the -V_{OUT} is loaded. A 10% FL must be connected from +V_{OUT} to Ground.

OUTPUT VOLTAGE ADJUSTMENT

For both single and dual models, the output reference voltage is referenced to the output ground: Pin 6 for singles and Pin 8 for duals. To trim the output voltage high, connect a 1% resistor (0kΩ–200kΩ range) between -V_{OUT} (Pin 6) and V_{OUT} Adjust (Pin 9) for the singles, and COM (Pin 8) and V_{OUT} Adjust (Pin 5) for the duals. To trim the output voltage low, connect a 1% resistor (50kΩ–500kΩ range) between +V_{OUT} (Pin 5) and V_{OUT} Adjust (Pin 9) for the singles,

and +V_{OUT} (Pin 7) and V_{OUT} Adjust (Pin 5) for the duals.

With the wiper connected to the V_{OUT} Adjust pin, a variable resistor (potentiometer) can also be used for V_{OUT} adjustment by connecting each end to +V_{OUT} and -V_{OUT} for the singles, and +V_{OUT} and COM for the duals. A potentiometer between 50kΩ–100kΩ can be used. Avoid using a low resistance potentiometer or a high temperature coefficient such as wound wire.

EXTERNAL SYNCHRONIZATION

The converter can be synchronized to an external system clock of 320kHz -2% to 10%. The external clock is AC-coupled to the input SYNC terminal (Pin 2) through a coupling capacitor from 220pF to

1000pF. The required amplitude is 3.3V to 5V and its duty cycle is 50% ±20%. Please refer to *Application Note DC-005: Synchronization* for more information.
